

EnsurepacSM

Minimise risk easily
and cost-effectively.

Ensurepac offers added
security for your valuable
assets.

recallTM
Your Information. Securely Managed.

How EnsurepacSM Works

First, each Ensurepac is assigned its own security barcode for identification and tracking purposes.

Confidential media is placed in an Ensurepac and must be sealed and signed to authorise destruction. Recall's expert staff collects the materials and safely transports them in locked vehicles to one of our Secure Destruction Centres where a Certificate of Destruction is issued once materials are properly destroyed.

1. Place used media in Ensurepac then sign and seal it.

2. Collection and Transportation

3. Secure Destruction and Recycling

4. Certificate of Destruction

Secure Destruction – Your Best Defence

Far too often, companies of all sizes have seen their sensitive information fall into the wrong hands. These situations can lead to multi-million dollar lawsuits, damaging publicity and loss of credibility. But Ensurepac helps eliminate this risk, easily and cost-effectively.

Through Ensurepac, Recall securely collects confidential materials such as backup tapes, magnetic and optical media, CDs, films and other items. These materials are rendered totally unrecognisable at a Recall Secure Destruction Centre.

Premium Security with Minimal Difficulty

Today, organisations cannot afford to mismanage their information. Storing it, preserving it and properly destroying it are crucial. In terms of compliance and risk mitigation, companies need a quick, effective, failsafe method of validating conformity with industry regulations and corporate policies.

With Recall's Ensurepac, you can now offer your department and organisation an easy, hassle-free means of properly destroying your especially sensitive and valuable data.

Simply deposit your discs, tapes, transparencies, CDs, microfiche and other materials into an Ensurepac for secure destruction. Complete with a unique barcode for traceability, the Ensurepac is securely transported in an alarmed vehicle to one of our Federal T4-accredited Destruction Centres. Here, we follow strict Standard Operating Procedures to properly destroy your materials and, upon completion issue a formal certificate of proof.

Flexibility and Security

The reinforced carriers are available in two sizes:

- * Small, holding up to 2KG/4.5LB (approximately 6 DLT tapes)
- * Large, holding up to 5KG/11LB (approximately 20 DLT tapes)

Professional Security

Timely destruction of sensitive business information is becoming increasingly important. As leaders in information security and protection, Recall offers proven experience around the globe. Our measures of security include: state-of-the-art protection at our Information and Destruction Centres, and; highly-skilled professionally-trained personnel that follow best-in-class operating procedures.
